PROFILE

Hi my name is Dejan and I'm a front-end web developer. I have built several websites for small and medium sized companies.

Looking at a design I can convert it into html and css with a pixel perfect precision.

I often use bootstrap so the turn-arounds of my projects are very quick. I always use GIT to track my progress and files, as well to collaborate with other developers.

I'm comfortable using JavaScript and jQuery to make the websites functional and interactive.

Currently learning react and looking for a position where I can progress and challenge my skills.
